

Attribute	Definition
Correctness	Conforms to specifications and standards
Efficiency	Relative use of resources (memory, time, network bandwidth)
Flexibility	Can change mission, function, data to satisfy other requirements
Integrity	(use) Performs without failure due to unauthorized access; (data) Preserves content and order of data and work products
Interoperability	Can couple software of one system to another
Maintainability	Ease of locating and fixing a failure within a time period (during use)
Portability	Can transport for use in another environment
Reliability	Performs without failures within specified time period
Reusability	Can convert software component for use in another application
Testability	Can verify (test) specified operation and performance
Availability	Degree to which system is operational and accessible when required for use
Usability	Ease of use
